Improved robustness of mobile interface	April 13, 2012	DS		
Web interface development	April 20, 2012	SS		

4 Status

- Base station user interface and processing completed; awaiting possible aesthetic revisions following inclusion of the touch screen.
- New task allocated for web interface, allocated to SS since other tasks are slipping.
- The mobile interface needs to be completed and integrated with the MySQL databases.
- Shopping list prediction algorithms require SciPy packages which requires Fortan; so status of Python application on Beagleboard has regressed.
- Temperature sensor needs to be debugged and included. Touchscreen drivers need to be updated; screen is currently mirrored.
