4   Status

- Base station user interface and processing completed; awaiting possible aesthetic revisions following inclusion of the touch screen.

- The web interface is complete. It was implemented using a simple HTML front end and PHP queries to MySQL database.

- The mobile interface needs to be integrated with the MySQL databases. ORMLite can not interact with MySQL databases and research indicates Android can not interact with remote databases directly. This interface may require additional PHP back end on the server side.

- SciPy packages have been installed and Python interface is functioning correctly again.

- Temperature sensor needs to be debugged and included. Touchscreen drivers need to be updated; screen orientation has been corrected but touch functionality is not working.
